

SDE-2 Python Developer

We are looking for smart, dynamic individuals who have a passion for coding, solving complex problems, and a strong will to learn. Join our engineering team and help us build functional and efficient server-side applications. To be successful in this role, you should have experience writing server-side logic and integrating it with the frontend. A basic understanding of front-end technologies is necessary as well. Ultimately, you'll build highly scalable & complex web applications that align with our business needs.

Job Responsibilities: -

- a. Write reusable, testable, and efficient code.
- b. Design and implement low-latency, high-availability, and performant applications.
- c. Design and create RESTful APIs for internal and partner consumption.
- d. Implement security and data protection.
- e. Debug code on the platform (written by self or others) to find the root cause of any ongoing issues and rectify them.
- f. Database query optimization & design and implement scalable database schemas that represent and support business processes.
- g. Implement web applications in Python, SQL, Javascript, HTML, and CSS.
- h. Provide technical leadership to teammates through coaching and mentorship.
- i. Delegate tasks and set deadlines.
- j. Monitor team performance and report on performance.
- k. Collaborate with other software developers, business analysts to plan, design and develop applications.
- l. Maintain client relationships and ensure Company deliverables meet highest expectations of the client.

Mandatory Skills: -

- a) Bachelor's/Master's degree in Computer Science, Engineering.
- b) 3 years of experience in Django/Flask.
- c) Solid database skills in relational databases.
- d) Knowledge of how to build and use RESTful APIs. Strong knowledge of version control.
- e) Hands-on experience on working on Linux systems.
- f) Familiarity with ORM (Object Relational Mapper) libraries.
- g) Experience with SQL Alchemy is a plus.
